

Final QA Project Presentation - OrangeHRM Web Application

Prepared by: Mst. Habiba Sultana | **Role:** QA Reviewer

1. Project Overview

OrangeHRM is a web-based Human Resource Management system tested for functionality, reliability, and user experience. This QA project covered end-to-end manual testing, focusing on core modules like Login, Dashboard, Admin, PIM, Leave, Recruitment, Performance, and Directory to ensure a stable and user-friendly HR platform.

2. Objective & Scope

The objective of this testing cycle was to validate the functional accuracy, usability, and reliability of the OrangeHRM application. Testing included functional, regression, smoke, validation, UI, and compatibility testing across major browsers.

3. Modules Tested

- Login & Authentication
- Dashboard
- Admin
- PIM (Employee Management)
- Leave Module
- Recruitment Module
- Performance Module
- Directory
- My Info

4. Test Execution Summary

Total Test Cases: 41

Passed: 29

Failed: 12

Pass Percentage: 70%

Fail Percentage: 30%

Critical Defects: 2

Major Defects: 6

Minor Defects: 4

Overall QA Status: Stable with Minor Issues

5. Key Findings

- Core modules like Login, Dashboard, Admin, and PIM loaded successfully.
- Validation issues were identified in weak password handling and required field checks.
- Session timeout behavior logs users out without warning.

- Invalid date handling issues were found in Leave and Recruitment modules.
- Minor UI and responsiveness issues were observed on smaller screens.

6. Recommendations

- Strengthen password validation and input rules.
- Add proper session timeout warning before auto logout.
- Improve date validation in Leave and Recruitment forms.
- Enhance required field validation and error guidance.
- Optimize UI responsiveness for better usability on smaller screens.

7. Final QA Conclusion

After thorough manual testing, the OrangeHRM system is considered stable and suitable for core HR operations. Most major workflows are functioning properly, while a few validation, usability, and UI improvements are recommended to enhance the overall user experience.
